Webinar on Networking – Scope and Opportunities

DATE: 11-Feb-2022

Vivekananda School of Information Technology (VSIT) organized a WEBINAR on “Networking – Scope and Opportunities”- to throw light on how one can make their career in the field of Networking.

What is a Network?

A computer network is a collection of two or more computer systems that are linked together. A network connection is established using either cable or wireless media. Hardware and software play an important part in connecting computers and tools in any network. Networking is a system that connects different independent computers in order to share information (data) and resources. The integration of computers with other devices has made it easy for users to communicate. Networking is not only about the design, construction and use of a network, but it also includes management, maintenance and operation of the network infrastructure, software and policies.

The webinar was conducted by **Mr. Pramod Singh**. He is working with Network Bulls for the last 6 years, also under his guidance, many students were placed in highly reputed companies. The session started with welcoming the speaker, teachers and all the students. Then host gave a brief about the speaker and the topic. The speaker shared information about various fields in computer networking, companies that hire students for different jobs, the average package for each position and different courses through which we can join the industry. Then he showed us real-time work in the lab through his camera. He also discussed, WHAT IS NETWORKING, NETWORKING FUNDAMENTALS, IP ADDRESS, OSI MODEL and NETWORKING DEVICES.

At the end of the session, Q&A was conducted for the students to ask their doubts. The speaker invited the students to visit his office/training centre for a better real-life experience. The students could see their labs, working atmosphere and how they work with clients. There were around 80 students in the event and the event received positive feedback.
