# **Webinar on Devsecops and Automation**

Vivekananda School of Information Technology organized an event on “Devsecops and Automation” on 26-11-2022 at 9:00 am.

A brief introduction of the topic of the webinar ‘Devsecops and Automation’ was given. Devsecops is the practice of integrating security testing at every stage of the software testing process. It decodes tools and practices that encourage collaboration between developers, security specialists and operation teams to build software that is both efficient as well as secure. Devsecops bring cultural transformation that makes security a shared responsibility for everyone who is building the software. Thereafter very informative and interesting details were shared by **Mr Vinod Bansal**, speaker of the Webinar i.e why organizations are keen to adopt this technology, a practical approach. How multinational companies can be benefitted from implementing this technology. The group benefitted from the details given as IT people should be focused on end-state solutions. The speaker was interactive and encouraged a two-way interaction during the event. Many participants raised queries and all the queries were answered by the speaker. In the end, a formal vote of thanks was presented to the speaker for giving his valuable time and an E-certificate was presented to him as a symbol of appreciation for the immense knowledge and experience he shared with us. It was an interactive session where students asked questions and all the queries were well answered by the speaker. The event helped students get a clear idea about the diverse range of applications to plunge into a career in Devsecops and automation. The webinar was attended by approximately 79 students.

Towards the end of the event, faculty coordinator Ms Kanta Malik showed gratitude to the guest speaker. Altogether, the event received positive feedback from the students.

### Agile & DevSecOps

- ❖ Agile and DevSecOps go hand-in-hand. DevSecOps facilitates adoption of Agile with right combination of tools & technologies and processes.
- ❖ Agile brings Business & Developer Community together, while DevSecOps brings Developer, Security and Operations together to create a full stack team to deliver business value with speed and quality.
- ❖ Agile talks about functional features of the product; while DevSecOps ensures the non-functional capabilities support the product.
- ❖ While Agile prioritizes timeliness with an iterative approach, DevSecOps promotes speed with quality during code build and deployment.
- ❖ DevSecOps enables continuous feedback through monitoring which supports agility and development.

Agile addresses gaps in Customer and Developer communications

DevOps addresses gaps in Developer and IT Operations communications
